Pür Cal

12% Ca

Pür Combo

2.5% S + micros

Pür Cu

2.5% S + 5% Cu

Pür Fe

2.5% S + 5% Fe

Pür Mag

5% S + 4% Mg

Pür Mn

3.5% S + 0.5% Fe + 6% Mn

Pür Soya

3% S + micros

Pür Zn

4.5% S + 9% Zn

The amino acids present in the formulation of Pür improve nutrient assimilation, increase enzymatic activity and decrease energy consumption. Amino acids form complexes with cations, thus enhancing their mobility in plants.

Citric acid is also part of the formulation of Pür. This biostimulant increases the photosynthetic rate and induces antioxidant defense systems. As an antioxidant, it reduces the concentration of reactive oxygen species (ROS). Citric acid is a very good chelating agent that reduces heavy metal stress.
